

## ☀ CALL FOR PAST, ONGOING AND UPCOMING PROJECTS ☀

### If you are...

- \* Activists,
- \* Researchers,
- \* Futurists,
- \* Climate specialists,
- \* Artist collectives,
- \* Youth organizations,
- \* Public institutions, etc.

### ... If you

- \* **have worked,**
- \* **are working,**
- \* **or intend to work**  
with/as young people  
on their/your visions  
of a future marked by  
climate change

### ... We'd love to hear from you!

- \* How do young people see the future in general, as well as their own futures, in the context of climate change, and the different ways of responding to it?
- \* How does it affect their perspectives, their hopes and fears, as well as their sense of possibilities in the world?\*

\* In this, we seek all kinds of visions of the world of tomorrow: utopian, critical, alternative, interrogative ones; realistic, artistic, speculative...

While the evidence of climate change is overwhelming, climate action is facing a backlash. This could, in part, be attributed to its failure to connect with the aspirations, but also the difficulties, of people all over the world. Young people are not exempt, in spite of surveys telling us that their choices and actions are already largely influenced by climate issues.

This project is about listening to them; to better understand how young people in the world see the future in the context of climate change, and of the different (political, economic, cultural, social...) ways of responding to it.

To do this, we are seeking out, documenting and interacting with past, ongoing or upcoming initiatives in which youths take, or are given, time to articulate, formulate and question their experiences and interrogations regarding climate change, the responses to it, and the futures that result from them. We wish to elevate the visibility of these initiatives and their outcomes; to create interactions among them; and to gain insights based on their combined findings.

In order to explore a wide plurality of visions, we are looking for collective, artistic, fictional and/or foresight processes, happening on the ground, in as many places in the world as possible.

## Interested?

### Choose how to contact us

- \* Reference your project(s) yourself, on our platform:  
<https://platform.plurality-university.org/wtfuture>
- \* Contact us directly:  
dkaplan@plurality-university.org  
[Instagram](#)  
[Linkedin](#)

### What we'll do

- \* Reference your work.
- \* Invite you into the "community of practice".
- \* Map the initiatives, and also the issues and insights they raise, and share it with the world.

### What this will produce

- \* More visibility for your work and your community.
- \* A community of practice to create links and opportunities.
- \* Open-source editorial material and tools accessible to a variety of publics.

## Who Are We?

The **Plurality University Network** connects those who mobilize the resources of the imagination to explore and enable empowering, just and sustainable futures.

The **European Climate Foundation** is a major philanthropic initiative working to foster the net-zero transition and ensure a healthy, thriving planet for current and future generations.

In association with **Teach The Future.**
